The digital age has made storing and document transfers more efficient than ever. However, many email systems still have a limit to the size of documents you can send or receive. You may additionally want to save on storage space on hard drives or cloud networks. If you have a PDF document that is a large file size, you will need to compress it. To shrink PDF documents in Adobe Acrobat, open the file within Adobe and work within that software program. There are third-party file compressor programs to use but these should be downloaded following all security protocols. Adobe Acrobat Pro was the desktop downloadable version of Acrobat. This version went up to version Acrobat XI before Adobe offered most of its product suite to a cloud-based system called Acrobat DC with "DC" referring to the "document cloud." Adobe Acrobat Pro and Adobe Acrobat DC are essentially the same programs just accessed differently by the user. Adobe Acrobat has a file compressor option to reduce the PDF file size within its Save functions. In Adobe XI, go to File and select Save As Other. This lets the program know you aren't merely capturing changes to the document but making a new file. Under Save As Other, choose Reduced Size PDF. Older Acrobat versions may call this Reduce File Size. Saving in the new version of Adobe Acrobat might make sharing the file difficult if the receiving party has an older version of Adobe Reader. In the process of using the file compressor, select the option Make Compatible With so you can choose to make the smaller file compatible with older versions of Adobe Reader. For example, if you choose Make Compatible With Adobe Reader 8, the new file is viewable by parties with Reader versions going back to version 8. You can shrink the PDF file size and still have a file that is too large. If this is the case, Adobe Acrobat has an option to optimize the file. When you reduce the size of a PDF, you are compressing it by 10 to 15 percent in something like a ZIP file. When you compress it, you are maximizing the information while reducing the file as much as 90 percent. To shrink PDF file size as much as possible, choose the Optimizer option instead of the condense PDF option. This is easily done by going to the same menu option in File, Save As Other. Instead of choosing Reduce Size PDF, choose Optimized PDF. Locate the Settings button and press it. Select Custom Settings. Make sure to choose 75 ppi when optimizing to reduce both color and gray scale images. Save the file and check the file size to confirm it meets your needs. The Acrobat PDF compression tool balances an optimized file size against the expected quality of images, fonts, and other file content. Save using PDF Optimizer (Acrobat Pro) PDF Optimizer provides many settings for reducing the size of PDF files. Some of the PDF Optimizer settings are comparable to the settings that are available when you create a PDF file using Distiller. Whether you use all of these settings or only a few depends on how you intend to use the files and on the essential properties a file must have. In most cases, the default settings are appropriate for maximum efficiency—saving space by removing embedded fonts, compressing images, and removing items from the file that are no longer needed. Before you optimize a file, it's a good idea to audit the file's space usage. The space audit results may give you ideas about where best to reduce file size. You can also reduce the size of your PDF by using the Reduce File Size command. Some methods of compression may make images unusable in a print production workflow. You should experiment with various settings before making changes that can't be discarded. The PDF Optimizer isn't available when Reflow is selected in the View menu. Learn how to compress PDF files to reduce file size using Adobe Acrobat DC on Windows or Mac. Audit the space usage of a PDF (Acrobat Pro) Auditing the space usage gives you a report of the total number of bytes used for specific document elements, including fonts, images, bookmarks, forms, named destinations, and comments, as well as the total file size. The results are reported both in bytes and as a percentage of the total file size. Choose File > Save As Other > Optimized PDF, or Go to Tools > Optimize PDF, and then click Advanced Optimization. The PDF Optimizer dialog box opens. Click the Audit Space Usage button at the top of the dialog box. To optimize several documents at the same time, use the Output options for the Actions Wizard. Also, you can quickly compress or reduce the size of a PDF file online from your browser. PDF Optimizer options (Acrobat Pro) Use the options from the Content pane options menu , choose Audit Space Usage. Optimize a PDF (Acrobat Pro) Open a PDF in Acrobat DC. Choose File > Reduce File Size or Compress PDF. Adobe is testing the simplified optimize PDF experience with two different names - Reduce File Size or Compress PDF. Therefore, after updating to the latest release, you see either the Compress PDF option or the Reduce File Size option. From the functionality perspective, both the options are the same. Choose the location to save the file and click Save. Acrobat DC displays a message showing the successful reduction in PDF size. In Acrobat DC, go to Tools > Optimize PDF. In the toolbar, from the Reduce File Size drop-down list, click Reduce Multiple Files. Adobe is testing the reduce file size experience in the Optimize PDF toolbar under two different names - Reduce File Size or Compress PDF. Therefore, after updating to the latest release, you see either the Compress PDF option or the Reduce File Size option. From the functionality perspective, both the options are the same. In the Arrange Documents dialog, click Add Files > Add Files. In the Add Files dialog, select the files you want to add and click Open, and then click OK. Select the version compatibility that you need, and click OK. Note: If you're certain that all your users use Acrobat DC or Adobe Acrobat Reader DC, limiting compatibility to the latest version can further reduce file size. In the Output Options dialog box, specify your folder and filename preferences, and click OK. Open the PDF Optimizer dialog box (File > Save As Other > Optimized PDF, or go to Tools > Optimize PDF, and click Advanced Optimization.). To use the default settings, choose Standard from the Settings menu, and then skip to step 6. If you change any settings in the PDF Optimizer dialog box, the Settings menu automatically switches to Custom. From the Make Compatible With menu, choose Retain Existing to keep the current PDF version, or choose an Acrobat version. (The options available in panels vary depending on this choice.) Select the check box next to a panel (for example, Images, Fonts, Transparency), and then select options in that panel. To prevent all of the options in a panel from executing during optimization, deselect the check box for that panel. (Optional) To save your customized settings, click Save and name the settings. (To delete a saved setting, choose it in the Settings menu and click Delete.) When you are finished selecting options, click OK. In the Save Optimized As dialog box, click Save to overwrite the original PDF with the optimized PDF, or select a new name or location. To optimize several documents at the same time, use the Output options for the Actions Wizard. Also, you can quickly compress or reduce the size of a PDF file online from your browser. PDF Optimizer options (Acrobat Pro) Use the options from the panels in the PDF Optimizer dialog box to reduce the size of a PDF. The Images panel of the PDF Optimizer lets you set options for color, grayscale, and monochrome image compression, and image downsampling. Change the PDF compatibility in the Images panel of the PDF Optimizer dialog box in Acrobat Pro. Specify the following options, as needed: Reduces file size by lowering the resolution of images, which involves merging the colors of original pixels into larger pixels. Note: Masked images and images with a size less than 16-by-16 pixels are not downsampled. Reduces file size by eliminating unnecessary pixel data. In general, JPEG and JPEG 2000 compressions give better results on images like photographs with gradual transitions from color to color. ZIP is the better choice for illustrations with large areas of solid, flat color, or patterns made up of flat colors. For monochrome images, JBIG2 compression, which is available in PDF Optimizer but not in Distiller, is the better choice. For JPEG and JPEG 2000 formats. JPEG and JPEG 2000 compression methods are typically lossy, a process that permanently removes some pixel data. You can apply lossy JPEG or JPEG 2000 compression to color images at various levels (Minimum, Low, Medium, High, Maximum). For JPEG 2000 compression, you can also specify lossless so that no pixel data is removed. Compression for monochrome images is lossless, except for JBIG2 compression, which provides both Lossy and Lossless modes of compression. Available only for JPEG 2000 format. Divides the image being compressed into tiles of the given size. (If the image height or width is not an even multiple of the tile size, partial tiles are used on the edges.) Image data for each tile is individually compressed and can be individually decompressed. The default value of 256 is recommended. Optimize Images Only If There Is A Reduction In Size When selected, if the image setting will cause an increase in file size, the optimization for that image is skipped. To ensure an exact match to the source document, it's a good idea to embed all fonts used in the document. If you don't need an exact match and you prefer a smaller file, you can choose not to embed fonts for roman text and East Asian text (Traditional Chinese, Simplified Chinese, Korean, and Japanese). Text in these languages is replaced with a substitution font when viewed on a system that does not have the original fonts. The Fonts panel of the PDF Optimizer contains two lists for fonts: fonts that are available for unembedding, and fonts to unembed. Certain fonts aren't available for unembedding and don't appear in the Fonts panel. To unembed fonts in a document, select one or more fonts in the Embedded Fonts list, and click the Unembed button. If you don't want to embed subsets of embedded fonts, deselect Subset All Embedded Fonts. To prevent unembedding for all fonts in the document, select Do Not Unembed Any Font. If your PDF includes artwork that contains transparency, you can use presets in the Transparency panel of PDF Optimizer to flatten transparency and reduce file size. (Flattening incorporates transparency into corresponding artwork by sectioning it into vector-based areas and rasterized areas.) PDF Optimizer applies transparency options to all pages in the document before applying other optimization options. If you select the Acrobat 4.0 And Later compatibility setting, the Transparency panel is enabled and all transparency in the file is flattened during optimization. This ensures compatibility with Acrobat 4.0 and earlier, which doesn't support transparency. When you create flattening presets, they appear with the default presets in the Transparency panel. Transparency flattening cannot be undone after the file is saved. The Discard Objects panel lets you specify objects to remove from the PDF and lets you optimize curved lines in CAD drawings. You can discard objects created in Acrobat and in other applications. Selecting an object removes all occurrences of that object within the PDF. In the Discard Objects area, you can select from these and other options: Discard All Form Submission, Import And Reset Actions Disables all actions related to submitting or importing form data, and resets form fields. This option retains form objects to which actions are linked. Makes form fields unusable with no change to their appearance. Form data is merged with the page to become page content. Discard All JavaScript Actions Removes any actions in the PDF that use JavaScript. Discard All Alternate Images Removes all versions of an image except the one destined for on-screen viewing. Some PDFs include multiple versions of the same image for different purposes, such as low-resolution on-screen viewing and high-resolution printing. Discard Embedded Page Thumbnails Removes embedded page thumbnails. This is useful for large documents, which can take a long time to draw page thumbnails after you click the Page Thumbnails button. Removes tags from the document, which also removes the accessibility and reflow capabilities for the text. Convert Smooth Lines To Curves Reduces the number of control points used to build curves in CAD drawings, which result in smaller PDF files and faster on-screen rendering. Detect And Merge Image Fragments Looks for images or masks that are fragmented into thin slices and tries to merge the slices into a single image or mask. Discard Embedded Print Settings Removes embedded print settings, such as page scaling and duplex mode, from the document. Discard Embedded Search Index Removes embedded search indexes, which reduces the file size. Removes all bookmarks from the document. Use the Discard User Data panel to remove any personal information that you don't want to distribute or share with others. If you're unable to find personal information, it may be hidden. You can locate hidden text and user-related information by using the Examine Document command (Tools > Redact > Sanitize Document, and then choose to Remove Hidden Information). Discard All Comments, Forms And Multimedia Removes all comments, forms, form fields, and multimedia from the PDF. Discard Document Information And Metadata Removes information in the document information dictionary and all metadata streams. (Use the Save As command to restore metadata streams to a copy of the PDF.) Discard All Object Data Removes all objects from the PDF. Discard File Attachments Removes all file attachments, including attachments added to the PDF as comments. (PDF Optimizer doesn't optimize attached files.) Discard External Cross References Removes links to other documents. Links that jump to other locations within the PDF are not removed. Discard Private Data Of Other Applications Strips information from a PDF document that is useful only to the application that created the document. This does not affect the functionality of the PDF, but it does decrease the file size. Discard Hidden Layer Content And Flatten Visible Layers Decreases file size. The optimized document looks like the original PDF but doesn't contain any layer information. The options in the Clean Up panel of the PDF Optimizer dialog box allow you to remove useless items from the document. These items include elements that are obsolete or unnecessary for your intended use of the document. Removing certain elements can seriously affect the functionality of the PDF. By default, only elements that do not affect functionality are selected. If you are unsure of the implications of removing other options, use the default selections. Object Compression Options Specifies how to apply Flate compression in the file. Use Flate To Encode Streams That Are Not Encoded Applies Flate compression to all streams that aren't encoded. In Streams That Use LZW Encoding, Use Flate Instead Applies Flate compression to all content streams and images that use LZW encoding. Discard Invalid Bookmarks Removes bookmarks that point to pages in the document that have been deleted. Removes links that jump to invalid destinations. Discard Unreferenced Named Destinations Removes named destinations that are not being referenced internally from within the PDF document. Because this option does not check for links from other PDF files or websites, it does not fit in some workflows. Converts all end-of-line characters to space characters, which improves Flate compression. Optimize The PDF For Fast Web View Restructures a PDF document for page-at-a-time downloading (byte-serving) from web servers. Enable Fast Web View in a PDF Fast Web View restructures a PDF document for page-at-a-time downloading (byte-serving) from web servers. With Fast Web View, the web server sends only the requested page, rather than the entire PDF. This option is especially important with large documents that can take a long time to download from a server. Check with your webmaster to make sure that the web server software you use supports page-at-a-time downloading. To ensure that the PDF documents on your website appear in older browsers, you can also create HTML links (versus ASP scripts or the POST method) to the PDF documents and use relatively short path names (256 characters or fewer). Verify that an existing PDF is enabled for Fast Web View Open the PDF in Acrobat, and choose File > Properties. Look in the lower-right area of the Description panel of the dialog box for the Fast Web View setting (Yes or No). Verify the Fast Web View Preferences setting Follow this procedure to make sure that you have Acrobat set up to enable Fast Web View during the PDF creation process. In the Preferences dialog box under Categories, select Documents. On the right side of the dialog box, under Save Settings, make sure that Save As Optimizes For Fast Web View is selected, and click OK. Enable Fast Web View for an existing PDF Use this procedure after you have verified your Fast Web View Preferences setting and checked the PDF properties to be sure that the file is not already enabled for Fast Web View. Choose File > Save As. Select the same filename and location. When a message appears asking if you want to overwrite the existing file, click OK. In Acrobat Pro, you can also quickly enable Fast Web View in entire folders of Adobe PDF files by using the Prepare for Web Publishing action. See Run an action.
